## ORGANISER II

OBASE.

£69.95

Obase allows you to create databases on your Organiser II. Files can be created with field types i.e. text, numeric and date. Each field also has a field name. Printer formats can be set up including printing on Fax paper and labels. Data from this program can be exported ready for import into Dbase or Archive. If you want to send your files directly to Dbase II or III without using import, a separate program is available price £39.95.

MAIL LIST.

£34.95

You can now store details on your Organiser and print directly onto Labels, or download your data to a PC compatible program. Each record includes Name, Telephone number, Address, Town, County, Post Code, country, Account number, contact, details, reference, telex and fax number. The file can be ordered under name and data can be transferred to and from Transforms PC Mail List program at £39.95.

#### STOCK CONTROL.

£34.95

Our Stock control program stores the following details, Stock number, Bar code number or Reference, Quantity, Buying price, Selling Price and Description. The bar code reader can be used to quickly search for a stock item or you can search using stock number or description. Total option allows you to quickly total the value of stock. Data can easily be transfered to and from Transform's PC Stock control program, available for £39.95.

#### BANK/CASH ACCOUNT.

£34.95

This program allows you to keep records of an unlimited number of bank accounts. Features include monthly, bi-monthly, quarterly and annual, analysis both on screen and printer, bank details include bank manager, phone number, account number etc. Money can be transferred between both cash and bank accounts, all accounts can be analysed under user defined codes, cash accounts handle expenses and VAT.

#### TIME BASE.

£34.95

If you have to keep a track of time whether it be at work or play this program is for you. For Solicitors or accountants who want to record time spent on contracts, service men who have to fill in time sheets, phone callers, time and motion studies through to Joggers who want to monitor their progress. Program prints a complete log of times or invoice, if used for contract work.

Transform Ltd., 24 West Oak, Beckenham, Kent BR3 2EZ.

TEL: 01-658 6350 01-4624666

do all of these major companies use the OBASE with the Psion Organiser?

American Express - BBC - British Aerospace - British Bakery - British Rail
British Telecom - De Beers Industrial Diamond Division Ltd - Food For Living
Grampian Health Board - Institute Of Naval Medicine - Interlink Express Parcels Ltd
Lewisham Community Services - Office of Population & Surveys - Saudi Irish Dairy
Company Ltd - Sharp Manufacturing - Thameside General Hospital
The Ministry Of Defence - The Post Office - The Royal Mail - Total Communications
Wildings plc.

# Because

**Obase** is a database management program that allows users to create and manage a database on the Psion Organiser XP, LZ, LZ64, and POS machines.

**Obase** is the only database that allows you to total all records or only records that are greater than, less than, equal to, contain or not containing the item entered.

**Obase** has both long and short field names. Simply press the MODE key and the field names appear by each field.

Obase field types are upper case text, lower case text, numeric, date DDMMYYYY, YYYYMMDD, MMDDYYYY, time, date and time, Barcode, Card-swipe, Sequencial, as last text and as last numeric.

**Obase** search includes a 5 criteria global search or specific field search, where you can specify whether the field is greater then, less than, containing, equal to or not containing the item entered.

**Obase** printing allows you to print across or down. You can specify the fields and number of files. As with searching, you can select the field criteria.

Obase copying, as with searching and printing, allows you to copy records to a new file where fields contain a specific field criteria.

**Obase** ordering allows you to order a file stored on a ram pack in the memory, or a file on a data pak with sufficient space to copy the file. You can order the file onto a specific field, whether you order numeric or text, ascending or descending.

**Obase** exporting and importing, allows data to be exported and imported in a fixed or comma delimited file format. You can specify the separator or the fixed length, export all, or as with printing, searching and copying, you can specify the field criteria.

**Obase** automatically detects if a bar code reader is attached, enabling fast and efficient adding and searching of data.

Obase modifications are available, should you require a specific search facility, (as for Sharp Manufacturing) we will modify the Obase. program to cater for your requirements.

## PC Stock Control.

· Shop floor.

· Point of Sale.

· Stock Taking.

#### Stock Records.

Transform's Stock Control runs on any PC compatible. You can store up to one billion stock items and all files are dBASEIII+compatible. Each record contains the following information.

Stock number (15 characters)
Bar Code number (13 characters)
Group Coding (5 characters)
Description (35 characters)
Total number of items in stock
8 site locations
Purchase price
Total value of line at purchase price
Selling price including and excluding vat.
6 different vat rates.

Total value of line at selling price.

Balance of stock after movement

3 trade discount rates Order level Re-Order Stock level Re-order quantity Items on order Date ordered

3 different suppliers

References
Account number

Total number of items sold Total value of sales

#### Movements.

Each Stock movement is recorded in a file which includes:-

Movement number

Date
Time
Stock number
Quantity moved
Type of movement
Reference

The following movement types are available:-

Cash Sale Accounts Sale Return Delivery Trade-in Refund Adjustment

Movement between location

#### Data Capture

Transform's PC Stock Control receives and transmits data to and from the Psion Organiser II hand held computer. This will enable your staff to use the data for point of sale, stock taking and representatives on the road.

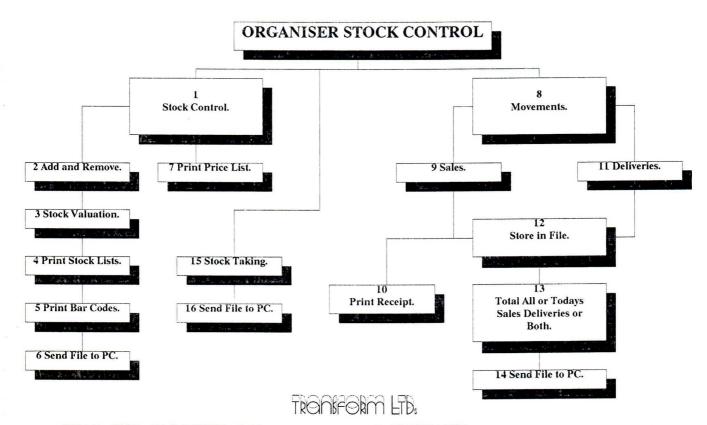

#### Bar Code printing.

Transform's PC Stock Control has also been designed to run with Barres (£172.50 available from Transform Ltd.) to print code 39 bar code labels. Barres can be used as a stand alone package to print code 39 EAN or Interleaved 2 of 5 on most printers.

Transform's PC Stock Control is menu driven with over 20 different print-outs, including retail price list, trade price list, all items low on stock all items on order, all items on order from one supplier and many more. This product is available from Transform Ltd for £149.95, Barres barcode printing program £150.00, Organiser II Stock Control program £85.06. All the above prices exclude vat.

#### STOCK CONTROL

The TRANSFORM Stock Control program is written to run on the Psion XP, LZ and LZ64. The program will work with or without the Psion Bar Code Reader and Psion Printer. We have included as many features as possible, but if you require any modifications to the program please contact Transform for a quotation. The program can store up to 2000 items on a 128K datapak.

- 1. STOCK. This section of the program stores the details of your stock control. The program uses 2 files, the STOCK files contains stock number, description, buying price, selling price, bar code and category (up to 30 categories can be used). The QUAN file holds the stock number and quantity, the stock number is used to link both files. A file called CODE holds the category number 1-30, and the description.
- 2. ADD and REMOVE STOCK. To add and remove stock you simply type in the stock number or description and scan through the file until you find the correct item, then press R and enter the number of items you are removing or A and enter the number of items you are adding to stock. Bar code users can use the Psion Bar Code Reader to find the item, there is also an option to swipe a bar code and remove one item from stock automatically, items added or removed in this section of the program are not recorded (see MOVEMENTS).
- 3. STOCK VALUATION. You can obtain a valuation of the total stock or the valuation of one line.
- 4. PRINTING STOCK LISTS. Comprehensive printing routines allows you to print all or one category, starting and finishing at specific stock numbers. Two printing widths are available, 80 columns for Psion printer users and 132 columns for Epson compatible printers.
- 5. PRINTING BAR CODES. Our Bar print option prints items stored in the Barcode field, with or without description and price on 1\*x3\* self adhesive tractor fed labels.
- 6. SEND FILE TO PC. This program links with the Transform PC Stock Control program, data can be typed into the PC Stock Control and sent to the Organiser, current quantities can be returned from the Organiser to any one of 8 locations in the Transform PC Stock Control.

- 7. PRICE LIST. The Psion Organiser can be used with the Psion Printer or any Epson Compatible Dot Matrix printer to print a price list
- 8. MOVEMENTS. For users who want to keep a record of items moving in or out of stock.
- **9. SALES.** The Psion Organiser can be used as a till to record sales printing a receipt, sales can recorded to the MOVEMENTS database if required. As sales are entered, the STOCK CONTROL quantities are updated.
- 10. PRINT RECEIPT. If the Organiser is connected to a Psion printer or Epson compatible printer, as a sale is recorded a till receipt is printed, including your company name, address, telephone number, VAT number, date, time, stock number, description, quantity, unit price excluding VAT and total VAT.
- 11. DELIVERIES. As items arrive in your store or shop they can be added to the stock quantity using the delivery option.
- 12. STORE IN FILE. The MOVE files contains stock number, quantity, date, price and category.
- 13. TOTAL SALES or DELIVERIES. This option allows to printout a list of all or today's sales, all or today's deliveries, giving you a value of movements..
- **14. SEND FILE TO PC.** The above file can be sent to your PC for merging into your PC data database.
- 15. STOCK TAKING. This option is only for use with the Transform PC Stock Control Program. using the Bar Code Reader or keyboard input you can record the quantities of up to 6400 items on a 128k datapak.
- 16. SEND FILE TO PC. The Stock Taking can then be sent to the Transform PC Stock Control and stored into 1 of any 8 locations. PC Stock Control. This is a comprehensive stock control program for the PC, it can be used to store upto 65000 items, giving the following details, stock number., category, description, quantities of items at 8 locations, buying price, selling price, profit margin, 3 trade discounts, suppliers code or bar code number, suppliers name and telephone number, minimum stock level, minimim re-order quantity, total items sold, total value of sales.

Stock Control.		Ex Vat	Including VAT
1498	Organiser Stock Control	£34.00	£39.95
3018	Organiser Stock Movements (includes Stock Control program)	£85.06	£99.95
1504	PC Stock Control Program (Hard disk only)	£149.95	5 £176.19
1474	Bar Code Reader	£150.00	£176.25
1450	Organiser II XP	£93.57	7 £109.95
1203	1000 Bar Code Labels	£12.00	£14.10

#### Data sheet

## **OBASE** for the Psion Organiser II.

#### **Field Names**

Obase has been designed to allow you to create databases on the Psion Organiser with field names and field types. You simply have to specify the number of fields with a maximum of 16 and enter a field name for each field, when adding a record you will be prompted by a 2 letter code for each entry and the Organiser will be set into the correct mode.

#### Field Types.

The user can define 7 different field types: Upper case, lower case, numeric, date (DDMMYYYY) (YYYYMMDD), (MMDDYYYY), time, date and time, Bar Code, Credit Card, Sequencial number, As last text and as last numeric. If you add a record which includes date or time fields these will be taken from the system clock.

#### Total all or selected records.

If your database includes numeric fields you can use this option to total these items, for example, if your database included assetts you could total all your assetts or only the cars or factories in Birmingham.

#### Ordering the file.

LZ users already have the ability to order files but with the limitation that the file must be stored in the memory, the file must only occupy 50% of the memory, and will only allow you to order on the first line of the record. Obase will allow you to order any size file stored in any device on any field.

#### Printer formats.

The user can define a different printer format for each file or use the standard form (which prints fields and records below each other with the field name), when defining a printer format you can specify the number of lines pert page whether record is printed accross the page placing all the records in one line, or beneath each other, the order the fields are printed in can be specified together with the number of fields.

You can select normal or condensed printing (using either an Epson compatible printer or the Psion printer), all or selected records can be printed.

#### Diary printout.

XP users can use Obase to printout the diary.

#### Bar Code users.

Obase will allow users to both input and search using the Psion Bar code reader.

#### Card swipe uses.

If you want to set up a clock card system Obase suports the Psion Card swipe, continuous input allows Obase to be left on ready for users to swipe their cards.

#### Import and Export.

Obase will allow you to export files from the Organiser ready for importing into Dbase, and comma delimited databases or Archive, all or selected records can be exported. Obase will import exported files from any of the above programs removing quotes or delimiting commas.

#### Searching.

Obase allows a global 5 critea search or field search, Including, Greater than, Less than or equal to.

Obase is supplied on a 32k datapak, Obase is protected but Transform will supply it on any size pack, telephone Transform for prices.

#### **Features**

- Field names.
- Order on any field.
- Total all or selected records.
- Printer formats.
- Print all or selected records.
- Normal or condensed printing.
- 13 Different field types. Text (upper case) Text (lower case) Numeric
   3 Date types
   Time
   Date and time.
   Sequencial number
   As Last Text
   As Last Numeric
- Supports bar code reader.
- Supports Card swip.
- Export files to Dbase or Archive.
- Export all or selected records.
- Import files from Dbase.
- Copy selected records.
- 5 item critera search.
- Print out diary. \*\*
- 4 or 2 line versions XP, LZ or LZ64.

\*\* XP models only.

### Organiser II Assembler

Using machine code on the Organiser has long been fraught with time consuming problems, how do you key in the code?, how do you run it? and, most important of all, how do you debug it?.

The A.R. Software Assembler answers all these problems.

The heart of the system lies in the use of standard text files, using standard 6303 mnemonics, either generated off the Organiser and downloaded as an OPL file or, for simple applications, typed in a line at a time at the Organiser keyboard.

The assember supports ALL the XP Operating system functions (OS\$xxxx - SWI calls) and labels.

The file can then be assembled to produce an OPL procedure that is pure Machine Code, yet treated by the Organiser as just another compiled procedure. This means it can be copied as text + object code or just the object code. True stand alone code.

No more typing Hex into arrays, no more hand assembly. If you need to make a change to the code just edit it on the Organiser and re-assemble. It makes using Machine Code as easy as OPL.

Code is always assembled in memory, prior to saving, to avoid unecessary pack use, (at a user specified address). Once there you can call up the STEP function.

#### Step

Debugging code on the Organiser has, until now, been impossible. All you could do was run it and try to make sense of the 'TRAP AT xxxx'' message.

This function gives you a very high level of control over what is happening as the code runs and even allows you to change it, or the registers, 'on-the-fly'.

In it's simplest form STEP will display the next instruction to be executed plus the contents of all the registers - AB (D), X, SP and CC. You then have the option of executing just this instruction or skipping to the following instruction. You can also set a Break Point (an address at which the code should stop executing) and run the code without interruption, or even run a complete sub-routine from a JSR or BSR instruction. As the program is stepped through all registers are updated on screen and you have the option of changing any, or all, of them including the Program Counter (PC). You can even patch the contents of memory or dump the code to a printer (if attached).

#### Dump

Allows you to look into the Organiser and display the contents of memory in both ASCII and Hex.

#### Copy

This option allows you to copy the contents of memory from one address to another.

#### Patch

This allows you to change the contents of memory, entering the data as Byte values or as characters.

#### Disassembler

The unassemble option disassembles memory to machine code mnemonics. The screen shows both the instruction and the bytes that make it up. With a printer attached this can be made automatic until a key is pressed.

#### **Printer Support**

All of the options above (except Copy & Patch), can direct their output to a printer via the Comms Link.

The A.R. Assembler is available through Transform Ltd and is supplied on a protected 32K datapak.

#### Features.

- Stand alone Organiser program.
- Assembles standard 6303X mnemonics recognises all XP Operating System (SW1) calls.
- Single Step through Machine Code.
- Disassemble the contents of memory, both RAM and ROM.
- Dump the contents of memory in ASCII or Hex.
- Copy bytes from one address to another.
- Patch memory, either as Bytes or Characters.
- Assembler produces OPL compatible procedures.
- Direct output to screen or printer (via Comms Link).
